Arts & F/TV 85
Project 2
Green Screen and Effects

Length:
15 seconds
You can appear or pan into the scene within the time period. In other words you can walk in on the two-second mark. You do not have to be in the entire 15-second sequence.

Size:
HDTV 720 29.97

Objective:
Create a key composite of yourself interacting with a virtual feature.

Expectations:

Personal Footage:
Key out the Green Screen.
Alter the footage using color correction or some visual affect. This can be a subtle color correction to balance the lighting and color. Though you can make a major modification if you desire to do so.

Background:
Must be a thematically correct video footage or backdrop. This element must be altered through the use of effects. It can be subtle lighting effects, or it can be a more complex simulation. (Rain, Smoke, Stars)

Time Remapping:
I would like you to slow down or speed up an area of your footage to make it more dynamic and animated.

Virtual content:
The file must include some element that is interacting with your footage.
Examples:
Animated Text wrapping around you.
A particle system that is tied to your gestures.
Electricity or glows emitting from your eyes, hands, fingers.
Try to keep it fun.

Sound:
Include ambient and special effects sounds. Play this up.

Consideration:
At this juncture you should start feeling comfortable navigating around the application. You may want to look up special effect tutorials on youtube as inspiration and inclusion in your project. If you find an effect and need help, please feel free to ask for help.

Due Date:
Oct 30th
